

GREAT CLOSURE IS NOW UNIVERSAL!

Experience the difference with the **SECOND GENERATION** Blom-Singer HME System

Blom-Singer has always been dedicated to responding to the needs of laryngectomees, surgeons and clinicians alike and is pleased to introduce the **second generation Blom-Singer HME System** - which is now compatible with other existing adhesive baseplates.

- Excellent voice results with baseplates from a number of manufacturers, including the Blom-Singer Truseal® Adhesive Housing range
- A new, low profile HME cartridge
- The innovative EasyTouch™ speech button for easier closure and more confident speaking
- An integrated Mucus Shield™ occluder for airtight closure and to protect the Humidifier from mucus secretions
- Front and side air vents for easier breathing and to prevent obstructions from clothing
- Intrinsic HumidiFilter® foam filter for heat and moisture exchange with antimicrobial agent

AVAILABLE ON PRESCRIPTION

Blom-Singer HME System

The Blom-Singer HME System consists of InHealth's new HME cartridge and TruSeal® adhesive housing and has been developed to improve the quality of air inspired by laryngectomees. As well as having the important heat and moisture exchange properties associated with a HME, it also has a range of new features and benefits as described overleaf. Designed as a daily disposable device that comes fully assembled, it can be worn by laryngectomees regardless of whether a speaking valve is used.

The new Blom-Singer HME System is available in a variety of formats:

Blom-Singer HME System Starter Kit (BE1055S)

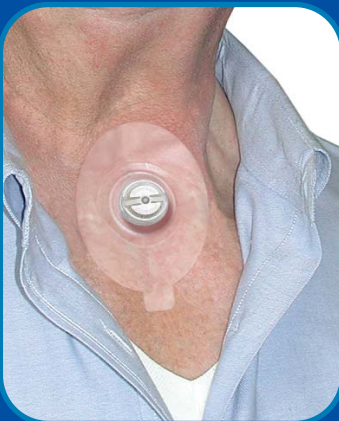

This starter kit comprises seven new HME cartridges and seven TruSeal® adhesive baseplates. It is designed for those laryngectomees who are keen to try the system for the first time.

Blom-Singer HME Cartridges (BE1055)

This comprises 30 new HME cartridges. Within this, the 30 cartridges are provided in five separate packs each containing six new HMEs.

Blom-Singer TruSeal® Adhesive Housings (BE6053/BE6054)

These are available in packs of 7 and 30 TruSeals respectively and are already on prescription.

A sophisticated, low profile and translucent material helps the HME discretely blend with the Blom-Singer TruSeal® adhesive housing, so it is less noticeable.

The new Blom-Singer HME System features the innovative EasyTouch™ speech button that makes stoma occlusion simple. Just push the EasyTouch™ speech button with minimal, manual force and it closes to produce voice. The fingertip, tactile response is immediate. You'll feel it's completely closed, so you can speak with more confidence.

Upon manual release, the EasyTouch™ speech button instantly returns to its open, breathing position. The EasyTouch™ speech button lets you manually switch between the open and closed positions. The feeling is definite. You'll know the speech button is either open or closed.
